Seeking to use my earned skills and knowledge to assist your facility in a nursing role. I would like to work in a fast pace adult care setting as such, concentrating on the speciality areas that provide services to a wide variety of diagnosis including but no limited to general medicine, general surgery, trauma, orthopedics and many other unique and complex conditions. This position will give me an opportunity to expand my practical experience while providing quality healthcare to patients.

Work Experience

Registered Nurse

Brigham & Women's Hospital

November 2016 to September 2019

Responsibilities:

- In the Neurology step-down unit I provide pre-operative and post-operative care before and after procedures. Help patients recover behavioral, physical, and cognitive abilities. Communicating within the interdisciplinary teams, your concerns and/or the goals for the patient. Implement a high level of patience and sensitivity, as not all patients are able to mentally function normally. Keep medical records current for all patients. Monitor patients' neurological activity often paying attention to any sudden changes from their baseline. Administer medications and specific ordered tests. Assist neurological doctors with procedures, and inform them about patient's conditions. Ensure patients' families are kept up to speed with patient's status and progress

Registered Nurse

Brigham & Women's Hospital

September 2019

Responsibilities:

- In the Neuro ICU I provide care to patients with a wide variety of neurological conditions such as stokes, brain tumors, head traumas, TBI's, Seizures, Intracranial hemorrhages. Monitor patient's neurological activity, often paying attention to any sudden changes from their baseline. Assist physicians with bedside procedures to assess and monitor our patient populations hemodynamic status. Often relying on brain oxygen monitoring, neuro-imaging, EEG, monitoring of cerebral blood flow, intracranial pressure and brain tissue chemistry. Communicating within the interdisciplinary teams, any concerns and/or the goals for the patient. Implement a high level of patience and sensitivity, as not all patients are able to mentally function normally. Keep medical records current for all patients. Ensure patients' families are kept up to speed with patient's status and progress
